

Features

- Output Voltage Range 5 to 24V
- Output current up to 1A
- No external components required
- Internal thermal overload protection
- Internal short-circuit current limiting
- Output transistor safe-area compensation
- Output voltage offered in 4% tolerance

Standard Application Circuit

A common ground is required between the input and the output voltages. The input voltage must remain typically 2.0V above the output voltage even during the low point on the Input ripple voltage.

XX = these two digits of the type number indicate voltage.

* = Cin is required if regulator is located an appreciable distance from power supply filter.

** = Co is not needed for stability; however, it does improve transient response.

Absolute Maximum Rating (Ta = 25°C unless otherwise noted)

| Parameter | Symbol | Limit | Unit |
|--|-----------|------------------|------|
| Input Voltage | V_{IN} | 35 | V |
| | | 40 | |
| Output Current | I_{OUT} | Internal Limited | |
| Power Dissipation | P_D | Internal Limited | |
| Operating Junction Temperature | T_J | 0~+125 | °C |
| Storage Temperature Range | T_{STG} | -65~+150 | °C |
| Thermal Resistance - Junction to Case | TO-220 | 5 | °C/W |
| | ITO-220 | 5 | |
| Thermal Resistance - Junction to Ambient | TO-220 | 50 | °C/W |
| | ITO-220 | 60 | |

Note: Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied.
